

Environment

Engineering and consulting
to manage environmental impacts
and restore natural conditions

Antea Group

Understanding today.
Improving tomorrow.

int.anteagroup.com

We address environmental, health, safety, and sustainability business challenges with fit-for-purpose solutions

Our planet is facing major environmental challenges such as climate change, scarcity of resources, loss of biodiversity, contaminated land and water. Managing the best available technologies has now become essential to preserve the environment.

We take environmental consulting seriously and spend time understanding your business and culture, taking into account your unique context and delivering fit-for-purpose solutions tailored to your organization. Through our innovative environment consulting solutions, you benefit from reduced business risk, cost savings, and value to your reputation. Our global reach provides resources anywhere you need them, anytime you need them.

The effects of an industrial facility or a new infrastructure development on the natural environment and neighboring populations must be considered. Whether you are an operator, a property owner or an investor, Antea Group assists you on the regulatory and environmental aspects during all stages of the project or throughout facility life, i.e., planning, permitting, construction, commissioning, operation, modification, closure, or deconstruction.

Engineering and consulting for various types of projects:

- > Industrial sites
- > Real estate assets
- > Redevelopment of brownfield sites
- > Contaminated sites
- > Sites in the remediation process
- > Mergers & acquisition projects

Thanks to our global presence and to our collaboration within the Inogen Alliance, we can support you at the facility level or at global scale for multi-site projects.
